Cancer and Energy Balance, Epidemiology and Overview: 2 (Energy Balance and Cancer)

Cancer and Energy Balance, Epidemiology and Overview: 2 (Energy Balance and Cancer)

Energy Balance and Cancer, Epidemiology and Overview is the first in a series of monographs to address the multiple facets of the world wide pandemic of overweight and obesity and its relation to cancer. This volume, authored by leading experts in their perspective fields, provides a broad and comprehensive overview of the problem from the epidemiologic viewpoint with focus on both general and special populations as well as a description of potential molecular mechanisms and reviews of the latest studies of factors impacting the association of energy balance and cancer including the effects of genetics, caloric restriction, exercise, behavior and the built environment.

The collected chapters and the authors contributing to this initial volume represent a transdisciplinary approach to analyze and develop novel approaches to understand and solve what, up to now, is a globally refractory problem. The book is written to be understandable and informative to individuals from all concerned disciplines. It should serve to orient students, investigators, nutritionists, public health officials, community planners, clinicians and policy makers to the extent of the problem, its multiple dimensions and potential approaches for research and corrective interventions.
