**Telescope** John F. W Herschel

This historic book may have numerous typos, missing text or index. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. 1861. Not illustrated. Excerpt: ... OF THE METHODS PRACTISED IN THE ACTUAL CONSTRUCTION OF LENSES AND SPECULA. (84.) Having thus described the principal combinations of refracting and reflecting surfaces, which have been devised for the construction of telescopes, it remains to say something of the practical means which have been adopted for the actual manufacture of the specula and lenses. They require a delicate and difficult art, especially as regards the former, where parabolic, elliptic, or hyperbolic figures have to be communicated to the polished surfaces in the very act of polishing them. In the case of lenses, as we have seen, all the requisites of a perfect telescope can be attained by the use of truly spherical surfaces, and these it is comparatively easy to form, by reason of the natural tendency of two surfaces which grind each other by equable rubbing over every part, to work each other into a spherical concavity and convexity exactly fitting. Practically speaking, when it is intended to work a glass surface to a sphere of an exactly assigned radius, the nearly approximate spherical form of the right curvature is first communicated to it by grinding in a metal basin, of the proper concavity, which may be done to some considerable nicety by turning the tool in a lathe, to fit a guage. The lens is then connected, or otherwise firmly attached, to the lower end of a vertical rod of wood or metal AB (fig. 23), the upper end of which terminates in a steel ball F, working in a cup c, to which it has been accurately fitted by smooth grinding, so that every point of the surface A of the lens, when made to oscillate or revolve conically by a motion given to the rod by a hand grasping it at B (where it is enveloped in woollen cloth or felt, to prevent the communication of warmth), will move in ...

### From reader reviews:

#### **Michael Bennett:**

Reading can called imagination hangout, why? Because if you find yourself reading a book specially book entitled Telescope your brain will drift away trough every dimension, wandering in every single aspect that maybe unknown for but surely can become your mind friends. Imaging every word written in a book then become one web form conclusion and explanation that will maybe you never get prior to. The Telescope giving you an additional experience more than blown away your head but also giving you useful data for your better life with this era. So now let us teach you the relaxing pattern the following is your body and mind will likely be pleased when you are finished looking at it, like winning an activity. Do you want to try this extraordinary wasting spare time activity?

#### **Malcolm Khan:**

Your reading sixth sense will not betray anyone, why because this Telescope e-book written by well-known writer we are excited for well how to make book that can be understand by anyone who also read the book. Written within good manner for you, still dripping wet every ideas and producing skill only for eliminate your personal hunger then you still question Telescope as good book but not only by the cover but also through the content. This is one e-book that can break don't ascertain book by its handle, so do you still needing an additional sixth sense to pick this!? Oh come on your studying sixth sense already told you so why you have to listening to yet another sixth sense.

#### **Clarence Kissel:**

The book untitled Telescope contain a lot of information on this. The writer explains your girlfriend idea with easy means. The language is very clear and understandable all the people, so do certainly not worry, you can easy to read the idea. The book was published by famous author. The author will bring you in the new time of literary works. You can easily read this book because you can please read on your smart phone, or model, so you can read the book in anywhere and anytime. If you want to buy the e-book, you can available their official web-site and also order it. Have a nice go through.

#### **Elisa Dumont:**

It is possible to spend your free time to learn this book this reserve. This Telescope is simple to bring you can read it in the playground, in the beach, train and soon. If you did not have much space to bring often the printed book, you can buy the particular e-book. It is make you easier to read it. You can save often the book in your smart phone. Therefore there are a lot of benefits that you will get when one buys this book.
