Reviews of Accelerator Science and Technology: Volume 5: Applications of Superconducting Technology to Accelerators Alexander W Chao, Weiren Chou

Over the past several decades major advances in accelerators have resulted from breakthroughs in accelerator science and accelerator technology. After the introduction of a new accelerator physics concept or the implementation of a new technology, a leap in accelerator performance followed. A well-known representation of these advances is the Livingston chart, which shows an exponential growth of accelerator performance over the last seven or eight decades. One of the breakthrough accelerator technologies that support this exponential growth is superconducting technology. Recognizing this major technological advance, we dedicate Volume 5 of *Reviews of Accelerator Science and Technology* (RAST) to superconducting technology and its applications.

Two major applications are superconducting magnets (SC magnets) and superconducting radio-frequency (SRF) cavities. SC magnets provide much higher magnetic field than their room-temperature counterparts, thus allowing accelerators to reach higher energies with comparable size as well as much reduced power consumption. SRF technology allows field energy storage for continuous wave applications and energy recovery, in addition to the advantage of tremendous power savings and better particle beam quality. In this volume, we describe both technologies and their applications. We also include discussion of the associated R&D in superconducting materials and the future prospects for these technologies.

Contents:

- Overview of Superconductivity and Challenges in Applications (*Rene Flükiger*)
- Superconducting Materials and Conductors: Fabrication and Limiting Parameters (*Luca Bottura and Arno Godeke*)
- Superconducting Magnets for Particle Accelerators (*Lucio Rossi and Luca Bottura*)
- Superconducting Magnets for Particle Detectors and Fusion Devices (*Akira Yamamoto and Thomas Taylor*)
- Superconducting Radio-Frequency Fundamentals for Particle Accelerators (*Alex Gurevich*)
- Superconducting Radio-Frequency Systems for High- β Particle Accelerators (*Sergey Belomestnykh*)
- Superconducting Radio-Frequency Cavities for Low-Beta Particle Accelerators (*Michael Kelly*)
- Cryogenic Technology for Superconducting Accelerators (*Kenji Hosoyama*)
- Superconductivity in Medicine (*Jose R Alonso and Timothy A Antaya*)
- Industrialization of Superconducting RF Accelerator Technology (*Michael Peiniger, Michael Pekeler and Hanspeter Vogel*)
- Superconducting Radio-Frequency Technology R&D for Future Accelerator Applications (*Charles E Reece and Gianluigi Ciovati*)
- Educating and Training Accelerator Scientists and Technologists for Tomorrow (*William Barletta, Swapan Chattopadhyay and Andrei Seryi*)
- Pursuit of Accelerator Projects at KEK in Japan (*Yoshitaka Kimura and Nobukazu Toge*)

Readership: Physicists and engineers in accelerator science and industry.

From reader reviews:

Ora Barbour:

Do you have favorite book? Should you have, what is your favorite's book? Book is very important thing for us to find out everything in the world. Each reserve has different aim or even goal; it means that reserve has different type. Some people experience enjoy to spend their a chance to read a book. They are reading whatever they acquire because their hobby is usually reading a book. Think about the person who don't like examining a book? Sometime, person feel need book once they found difficult problem or even exercise. Well, probably you'll have this Reviews of Accelerator Science and Technology:Volume 5: Applications of Superconducting Technology to Accelerators.

Erica Rawlins:

In this 21st hundred years, people become competitive in every single way. By being competitive now, people have do something to make these survives, being in the middle of typically the crowded place and notice by means of surrounding. One thing that often many people have underestimated the idea for a while is reading. Yes, by reading a reserve your ability to survive enhance then having chance to stay than other is high. For yourself who want to start reading a book, we give you this kind of Reviews of Accelerator Science and Technology:Volume 5: Applications of Superconducting Technology to Accelerators book as nice and daily reading publication. Why, because this book is more than just a book.

Sheila Davis:

The reserve with title Reviews of Accelerator Science and Technology:Volume 5: Applications of Superconducting Technology to Accelerators has lot of information that you can study it. You can get a lot of help after read this book. This kind of book exist new know-how the information that exist in this guide represented the condition of the world now. That is important to yo7u to be aware of how the improvement of the world. This book will bring you inside new era of the internationalization. You can read the e-book on your own smart phone, so you can read the item anywhere you want.

Weston Brock:

Guide is one of source of understanding. We can add our understanding from it. Not only for students but additionally native or citizen need book to know the change information of year to help year. As we know those books have many advantages. Beside we add our knowledge, can bring us to around the world. From the book Reviews of Accelerator Science and Technology:Volume 5: Applications of Superconducting Technology to Accelerators we can acquire more advantage. Don't someone to be creative people? To become creative person must choose to read a book. Just choose the best book that appropriate with your aim. Don't be doubt to change your life with this book Reviews of Accelerator Science and Technology:Volume 5: Applications of Superconducting Technology to Accelerators. You can more attractive than now.
