Extra Sensory: The Science and Pseudoscience of Telepathy and Other Powers of the Mind Brian Clegg

Extra Sensory is a pop-science look at the untapped abilities of human beings, from ESP to Telekenesis and other real life sciences that are currently being studied today, from physicist Brian Clegg.

We'd all love to have 'psi' abilities like telepathy, telekinesis, and remote viewing. But is there any solid evidence to back up these talents, or are they nothing more than fantasy? We still only understand a small percentage of the capabilities of the human brain—and we shouldn't dismiss such potential powers out of hand. Although there is no doubt that many who claim these abilities are frauds, and no one has yet won James Randi's \$1M prize for demonstrating ESP under lab conditions, we still have a Nobel prize winner suggesting a mechanism for telepathy, serious scientists researching the field and university projects that produced potentially explosive results. What's the verdict? By looking at possible physical mechanisms for ESP and taking in the best scientific evidence, the reader can discover if this is all wishful thinking and deception, or a fascinating reality. The truth is out there.
