Nerve, Organ, and Tissue Regeneration: Research Perspectives

Nerve, Organ, and Tissue Regeneration: Research Perspectives

Nerve, Organ, and Tissue Regeneration: Research Perspectives presents the proceedings of a symposium held in Harpers Ferry, West Virginia, on September 21-24, 1982. This book explores the neural and nonneural areas of regeneration, with emphasis on the nervous system.

Organized into six parts encompassing 22 chapters, this compilation of papers examines the commitment of the Veterans Administration to deal with the clinical problem of spinal cord injury by establishing 19 spinal cord injury treatment and rehabilitation centers throughout the United States. This book then discusses the characteristics of the neuronal response to axon injury, which vary from cellular hypertrophy and heightened metabolism to cell death. Other chapters consider the three phases of axonal regeneration, including sprout formation, elongation, and maturation. The final chapter deals with the structural and functional alterations that developed when the length of the mammalian intestine is shortened by excision or by-pass of a long segment.

This book is a valuable resource for biologists, orthopedic surgeons, and neuroscientists.
