Building the Mobile Internet (Networking Technology) Mark Grayson, Kevin Shatzkamer, Klaas Wierenga

The complete guide to technologies and protocols for delivering seamless mobile Internet experiences

In *Building the Mobile Internet*, three leading mobility architects and implementers from Cisco present complete foundational knowledge about tomorrow's mobile Internet. The authors cover everything from market trends and user expectations to the latest technical approaches for making the Internet "mobile by design."

Writing for senior technology decision-makers and network design professionals, the authors explain the relatively static nature of the Internet's original protocols and design, discuss the concept of "mobility," and identify evolving mobility requirements. Next, they thoroughly explain each of today's most promising techniques for building mobility into the Internet, from data link layer to application layer. For each layer, the authors cover mechanisms, protocols, relevant Wi-Fi and cellular architectures, and key use cases.

Using this book's guidance, mobile network executives can define more effective strategies, network designers can construct more effective architectures, and network engineers can execute more successful migrations.

Mark Grayson, Cisco Distinguished Consulting Engineer, leads Cisco's mobile architecture strategy. He has 20+ years of wireless experience ranging from military and satellite systems to the evolution of traditional cellular architectures and the creation of new small cell solutions. He has been granted 50+ patents.

Kevin Shatzkamer, Cisco Distinguished Systems Architect, is responsible for long-term strategy and architectural evolution of Cisco mobile wireless networks. His experience ranges from 3G and LTE to security, video distribution, and QoS. He now works with both content providers and service providers to enhance the end-to-end digital media value chain for mobility.

Klaas Wierenga, Senior Consulting Engineer in Cisco's Office of the CTO, has 15+ years of experience implementing diverse mobility, security, and identity solutions for enterprises, municipalities, hospitals, and universities. He created the worldwide eduroam service for federated network access in academia.

- Understanding key mobility market trends: device proliferation, accelerating consumption, and radio-specific scalability problems
- Reviewing the challenges that mobility presents to conventional Internet architectures
- Understanding nomadicity, including authentication for users moving across networks and operators
- Identifying opportunities to address mobility at the data link layer
- Comparing and using network layer solutions to deliver seamless mobility and session continuity
- Integrating mobility functionality into the transport/session layer
- Adding mobility functionality to the application layer—including support for moving media sessions between devices
- Redesigning Internet architecture to enable long-term improvements to mobility

This book is part of *the Networking Technology Series* from Cisco Press®, which offers networking

professionals valuable information for constructing efficient networks, understanding new technologies, and building successful careers.

From reader reviews:

Michael Johnson:

Why don't make it to be your habit? Right now, try to ready your time to do the important act, like looking for your favorite publication and reading a reserve. Beside you can solve your trouble; you can add your knowledge by the e-book entitled Building the Mobile Internet (Networking Technology). Try to make book Building the Mobile Internet (Networking Technology) as your close friend. It means that it can being your friend when you experience alone and beside regarding course make you smarter than ever before. Yeah, it is very fortunated for you personally. The book makes you more confidence because you can know every thing by the book. So , let me make new experience and knowledge with this book.

Jackie Lafond:

Here thing why this specific Building the Mobile Internet (Networking Technology) are different and dependable to be yours. First of all reading through a book is good nevertheless it depends in the content from it which is the content is as tasty as food or not. Building the Mobile Internet (Networking Technology) giving you information deeper since different ways, you can find any reserve out there but there is no publication that similar with Building the Mobile Internet (Networking Technology). It gives you thrill looking at journey, its open up your own personal eyes about the thing which happened in the world which is probably can be happened around you. It is possible to bring everywhere like in area, café, or even in your approach home by train. In case you are having difficulties in bringing the imprinted book maybe the form of Building the Mobile Internet (Networking Technology) in e-book can be your alternative.

Adrian Johnson:

Do you one of people who can't read enjoyable if the sentence chained inside the straightway, hold on guys this kind of aren't like that. This Building the Mobile Internet (Networking Technology) book is readable through you who hate those straight word style. You will find the data here are arrange for enjoyable examining experience without leaving actually decrease the knowledge that want to offer to you. The writer connected with Building the Mobile Internet (Networking Technology) content conveys objective easily to understand by many individuals. The printed and e-book are not different in the content material but it just different such as it. So , do you even now thinking Building the Mobile Internet (Networking Technology) is not loveable to be your top listing reading book?

Estella Pierre:

This Building the Mobile Internet (Networking Technology) is great guide for you because the content that is full of information for you who else always deal with world and get to make decision every minute. This kind of book reveal it data accurately using great manage word or we can point out no rambling sentences included. So if you are read that hurriedly you can have whole facts in it. Doesn't mean it only gives you straight forward sentences but hard core information with wonderful delivering sentences. Having Building

the Mobile Internet (Networking Technology) in your hand like having the world in your arm, info in it is not ridiculous one particular. We can say that no e-book that offer you world within ten or fifteen small right but this guide already do that. So , this can be good reading book. Hey Mr. and Mrs. occupied do you still doubt in which?
